

APV2 发布仓库说明

本次发布使用 3 个公开仓库:

- <https://github.com/ginsonko/Artificial-PsyArch-V2>
- <https://github.com/ginsonko/APV2-GL-OpenWorld-Chinese>
- <https://github.com/ginsonko/APV2-Reproduction-Artifacts>

统一冻结 tag: apv2-release-20260614-final-longreport

仓库	主要内容	版本锚定
Artificial-PsyArch-V2	AP-Core runtime、机制实验、主论文和补充材料	Git tag + PUBLIC_STAGING_MANIFEST.json
APV2-GL-OpenWorld-Chinese	GL 学习协议、开放中文对话验证、Fresh300/Skill38 证据	Git tag + PUBLIC_STAGING_MANIFEST.json
APV2-Reproduction-Artifacts	发布稿、实验输出、第三方复现与冻结 artifact	Git tag + PUBLIC_STAGING_MANIFEST.json

外发 zip 包的 SHA-256 不写入会被重新打包的仓库内部文件，统一由外层

release_repos_20260614/PUBLIC_REPO_STAGING_SUMMARY.json 记录。这样可以避免 zip 内文件记录自身 zip hash 造成的递归漂移。

发布文档使用中文文件名，并同时提供 Word 与 PDF:

文件	用途
APV2_论文_白箱预测行动闭环架构_20260614.docx / .pdf	发布版短主文
APV2_长篇技术报告_完整论证与实验附录_20260614.docx / .pdf	完整理论、机制、公式、trace、实验附录与审稿疑问回应
APV2_新闻稿_让机器一直是它自己_20260614.docx / .pdf	新闻稿/科普稿
APV2_仓库发布说明_20260614.docx / .pdf	仓库和复现入口说明

许可证: APV2 Public Research License v2026-06-14。这是 source-available public research license, 不是 OSI open-source license。它允许公开阅读、clone、fork、本地运行、非商业研究复验和合理引用，同时保留商业使用、模型训练、数据再打包、产品部署和派生系统公开分发等权限边界。

建议 GitHub 仓库简介、Release notes 和 README 都统一使用这句话:

Source-available public research preview under the APV2 Public Research License v2026-06-14.

1. AP-Core 主仓库

仓库名: Artificial-PsyArch-V2

简介:

APV2 core runtime: a white-box predictive-action architecture for continuous cognition, with AP-Core mechanism experiments and paper artifacts.

推荐 Topics:

artificial-cognition, cognitive-architecture, white-box-ai, agent-memory, continual-learning, predictive-processing

README 首页第一句:

APV2 is a white-box predictive-action runtime for continuous cognition: state atoms, dual-energy state pools, short-term narrative slots, residual recall, successor prediction, cognitive feelings, action feedback, and persistence.

2. GL 开放中文对话仓库

仓库名: APV2-GL-OpenWorld-Chinese

简介:

GL learning and validation layer for APV2 open-world Chinese dialogue: teacher-off curricula, Fresh300 evaluations, no-leakage audits, and skill packages.

推荐 Topics:

chinese-dialogue, teacher-off, no-leakage, curriculum-learning, open-world-dialogue, apv2

README 首页第一句:

This repository contains the GL learning protocol and validation artifacts for APV2 open-world Chinese dialogue, including teacher-off Fresh300 and Skill38 evidence.

3. 实验复现与冻结锚定仓库

仓库名: APV2-Reproduction-Artifacts

简介:

Frozen APV2 experiment artifacts, manifests, hashes, rerun logs, and third-party reproduction materials.

推荐 Topics:

reproducibility, artifacts, experiment-manifest, audit-trace, apv2, rust-reproduction

README 首页第一句:

This repository anchors APV2 release artifacts: frozen experiment outputs, manifests, SHA-256 records, rerun commands, and third-party reproduction summaries.

4. 第三方复现仓库

保持引用:

https://github.com/ACG-j/artificial_psych

这不是官方 AP-Core 主仓库，而是第三方独立实现和复现证据。
